

We would like to discuss the ways that healthy living can be embedded into the development, both in its management and physical structure.

How can green spaces be integrated with development and with the way people live their lives, to maximise the benefits from the natural environment, while also delivering biodiversity gains?

- Physical activity, - outdoor recreation, - active travel

- Better academic performance, - improved concentration and behaviour

## How can we implement healthy living at PR6a?

Question	Comments
Physical activity and active travel	<p>Ensure links from existing developments</p>
